

Write up for RAILWAY CROSSING STATUS:

First, let's start with the project structure

```
- src
- main
- java
- com
- railway
- model
- Crossing.java
- util
- DBUtil.java
- web
- CrossingServlet.java
- resources
- db.properties
- web app
- WEB-INF
- views
- crossing.jsp
- index.jsp
- web.xml
```

uses JSP for the frontend, Servlet for the backend, and JDBC for performing CRUD operations on a MySQL database.

Crossing.java (Model class):

Crossing Servlet.java (Servlet for handling CRUD operations)

crossing.jsp (JSP view for displaying the railway crossing information):

web.xml (Deployment descriptor for configuring the servlet)
